

# SPECTROM

Unique ecosystem for business startups and crypto  
Made for synergy with users for users profit

## WHITE PAPER

The Spectrom project is an ecosystem that allows everyone to create easily their own crypto startup with very low fees.

Spectrom includes the following features:

**Logo Generator:** With the convenient logo generator you can create your unique logo in just a few clicks. Logo templates are developed by our professional designers. We do not use pre-made templates. Before making a payment you can visualize the logo on various products. You can also create logos for cryptocurrencies and other products. After payment you will receive a certificate of sole ownership via email and the template will be removed from the system.

**Name Generator:** This feature simplifies the process of creating a name for your brand using a set of suffixes and provides a free domain for your future website.

**Marketplace:** After purchasing a logo you can buy necessary items with your logo such as clothing. Before making a payment, you can use 3D visualization to ensure that your logo will be applied using printing or machine embroidery. You can choose the size, color scheme and placement of the logo. Orders can be shipped worldwide in our branded packaging from a quality manufacturer at an affordable price.

**Freelancer Platform:** With this feature you can find suitable developers, designers and other specialists for your crypto project. Spectrom ensures a guaranteed transaction as a third party.

**Franchising:** You can buy or sell your crypto project even without having its own token. Spectrom will act as a guarantor conducting a thorough analysis and facilitating the transaction.

**NFT Platform:** A platform for talented artists where you can create and sell your own NFTs as well as use them for other purposes. In the future we will connect it to a neural network.

**Token Creation:** With this builder you can instantly create your own token using popular blockchains even without special skills. This feature will have advanced capabilities for adding functions to the smart contract.

**Swap:** You can list your tokens for trading on Spectrom after a thorough project verification. Spectrom aims to collaborate only with honest projects to combat fraud. This feature will have a unique design and user-friendly interface.

**ICO:** This option allows you to pre-sell your tokens with extensive functionality. You can also indicate the completion of KYC and audit the smart contract to increase trust in your project.

**Airdrop:** We can fully manage the entire airdrop process. You can add your parameters, cost, tasks, description and social networks. Spectrom will gather all the information for you and publish your airdrop to the audience.

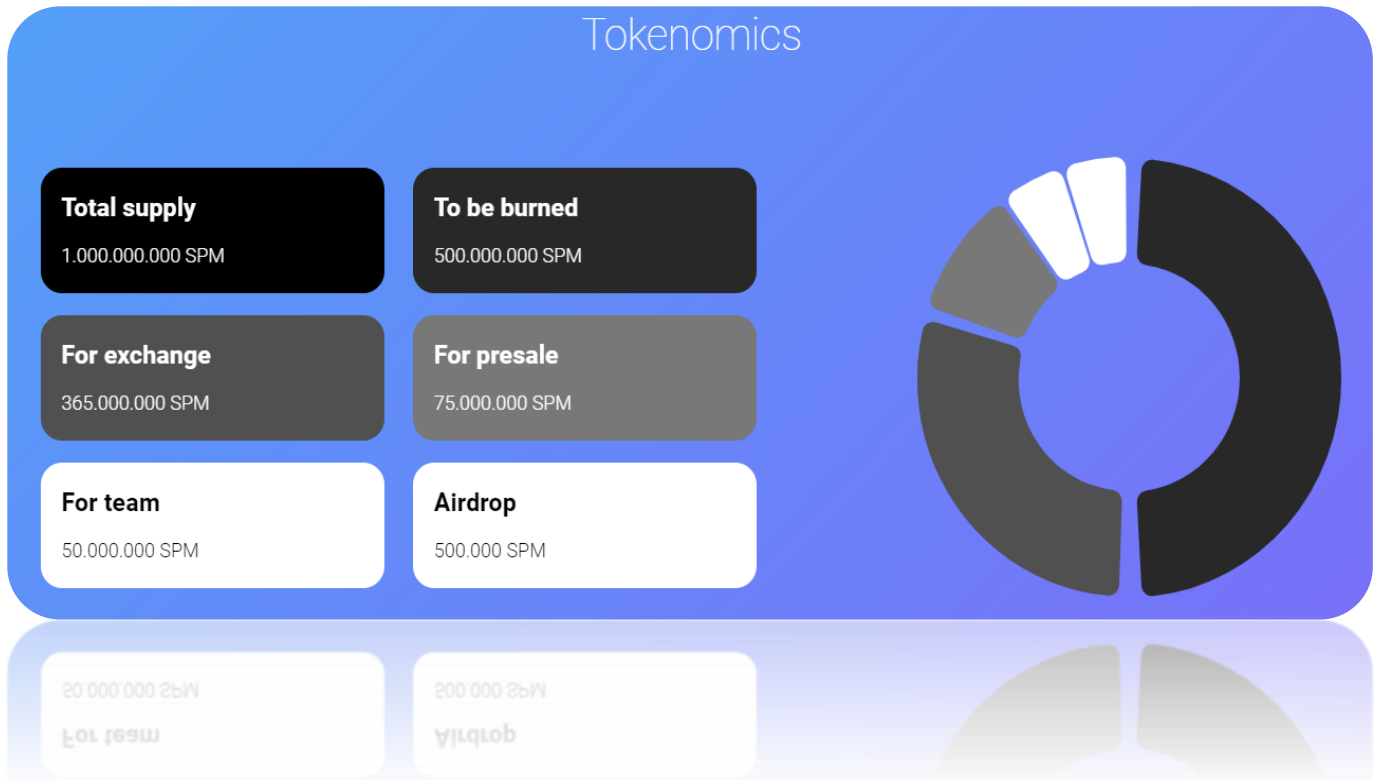

**Website Builder:** A unique tool for creating your own website. Without development experience you can create your own site in minutes using various templates and tips for your meme token and other purposes. Users will be able to create a beautiful and unique website in a few mouse clicks using a variety of unique templates with maximum hints and descriptions.

We will introduce new unique features to the Spectrom ecosystem through community voting.

**SPM Token:** As a means of payment we have issued our own SPM token which can be used for payments within the Spectrom ecosystem.

The SPM smart contract is simple and developed on the Arbitrum blockchain with open-source code. It does not have features like tax, blacklist, anti-whale and others.

Several months after the launch of Spectrom we will exempt you from paying for features such as logo creation, token creation, swap and others and you will be able to use them for free until we introduce a payment system that adjusts the current SPM rate to the dollar.

<http://t.me/SpectromGlobal>

Examples of payment in the Spectrom ecosystem are as follows:

1. Logo generator - payment in SPM tokens.
2. Name generator - service is provided for free.
3. Marketplace - payment accepted in USDT and USDC tokens.
4. Freelancer platform - payment accepted in USDT and USDC tokens.
5. Franchising - payment accepted in USDT and USDC tokens.
6. NFT platform - payment accepted in ETH token.
7. Token creation - payment in SPM tokens.
8. Swap - payment in SPM tokens.
9. ICO - payment in SPM tokens.
10. Airdrop - payment in SPM tokens.

Exclusive club NFTs will be developed and released. The holders of club NFTs will use Spectrom services without commissions and will get a pass to the VIP.

In the future we plan to develop an online game where users can have fun and earn.

The SPM token will be used as the in-game currency.
